Family Sentinel

For churches, nonprofits & small businesses · familysentinel.org
Security for organizations too small to hire a security team

The invoice looked right. The *bank details* did not.

Nobody clicked anything careless. No malware ran. A criminal simply read your organization's email for three weeks, learned who asks whom for money, waited for a real invoice — and sent one small correction. **This is the single largest source of financial loss for organizations,** and it is aimed squarely at churches, nonprofits and small businesses, because that is where one trusted bookkeeper can move real money without a second signature.

WEEK ONE
A password leaks
A staff login turns up in a breach dump from some unrelated website. It still works here, because it was reused.

WEEK TWO
They read, quietly
No alarm sounds. They add a hidden forwarding rule and simply watch how your money actually moves.

WEEK THREE
They learn the voice
How your pastor or director writes. Who approves. Which vendors are due. Which week is busiest.

THE ASK
One small change
A real invoice, a new account number, a plausible reason. Finance pays it. It is discovered weeks later.

We break it at *week one.*

Org Guard watches the admin console nobody has time to read — leaked staff credentials, a sign-in from somewhere impossible, a new mail-forwarding rule, a risky app grant. Urgent findings are verified by a Security Architect and reach you as **a phone call, not a ticket.** Read-only by design: we can watch, and we can never send mail, change a setting, or touch a payment.

What we do for organizations

Fixed scope, fixed price — the exact quote is agreed in writing before anything starts. Every engagement begins with a free 30-minute scoping session — and if the honest answer is "you don't need us yet," that is what you will hear.

Org Guard — ongoing monitoring
Continuous, read-only watch over your Google Workspace or Microsoft 365: account takeover, forwarding rules, risky app grants, domain spoofing. Weekly digest, one meaningful call when it matters.

Staff & member email protection
Every mailbox screened for phishing, wire and gift-card fraud, and the scams aimed at elderly members. Simple bulk pricing; extend it to your congregation as a member benefit.

Security Posture Review
Where your risk actually is, ranked — not a 200-item scanner dump. Written for a board to read.

Incident Response Readiness
A named incident commander, your regulatory clocks written down, your insurer's real coverage, and a tabletop with your actual people.

Cyber-Insurance Readiness
We sit down with the questionnaire, close the gaps it exposes *before* you attest, and hand you an evidence packet for renewal.

AI Security & Hardening
Your staff already use AI. We inventory which tools, what data each can reach, and whether the vendor trains on it — then fix what it turns up.

Penetration Testing
Authorized testing of your site and external surface. Every finding demonstrated, then hardened *with* you — and re-tested free, with a closure letter.

SCAN ME

Book the free 30-minute scoping session.

We ask how your organization actually runs — who handles money, who has admin access, what happened the last time something went wrong, what your insurer already asked. Then we tell you which of the above is worth doing, in what order, and what it costs. No retainer, no obligation.
